

IMPROVE THE EFFECTIVENESS OF YOUR SPRAY APPLICATIONS

Improve the effectiveness of your spray applications with an adjuvant proven to maximize performance. **Dyne-Amic®** is a flexible, easy-to-use adjuvant that spreads like a surfactant and penetrates better than crop-oil concentrates to deliver reliable results.

Dyne-Amic is an effective blend of highly-refined methylated seed oils combined with specialized organosilicone-based nonionic surfactants. The oil component in Dyne-Amic provides excellent penetration, while the surfactant provides highly effective spreading and coverage. With its low phytotoxicity qualities, Dyne-Amic is also much easier on your crops than conventional crop-oil concentrates.

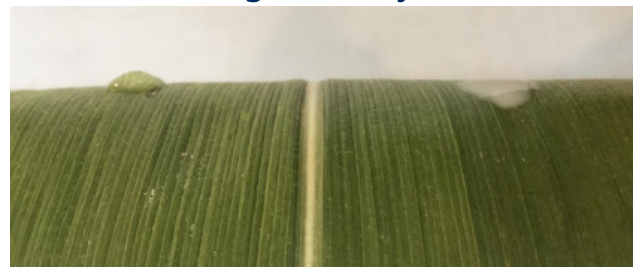

To achieve the results you expect, maximize your spray application performance with superior penetration and spreading from Dyne-Amic. Contact your local Helena representative or authorized dealer for more information.

PRODUCT HIGHLIGHTS

- Excellent canopy deposition & spreading for thorough coverage
- Excellent penetration of plant tissue
- Reduced evaporation
- Allows use of lower-labeled water rates
- Utilizes soybean oil

Significant Improvement of Spreading & Coverage with Dyne-Amic

Water Alone

Dyne-Amic
