

BRUSH & BASAL CONTROL WITH USER-FRIENDLY RATES

Trycera® is a selective broadleaf herbicide that offers outstanding brush and basal control, even under environmental extremes. It contains a triclopyr acid formulation that improves efficiency by minimizing spray application and mixing problems.

With no phenoxy odor, Trycera is ideal for application in sensitive areas. It contains optimized pH and water conditioning properties to improve performance by reducing antagonisms. Trycera also features enhanced absorption, low volatility and good compatibility with most tank-mix partners.

Due to its specialized, patent-protected formulation, Trycera offers excellent brush and basal control at lower rates than the competition. The result is greater herbicide use efficiency, which reduces the amount of active ingredient used. Contact your local Helena representative or authorized dealer for more information on Trycera.

PERFORMANCE

Trycera

1.44 lbs ae/acre @ 64 oz/acre

Ester triclopyr

2 lbs ae/acre @ 64 oz/acre

PRODUCT HIGHLIGHTS

- Outstanding control of tough broadleaf weeds, even under environmental extremes
- Extremely low odor and very low volatility for applications in sensitive areas
- Optimized pH and water conditioning properties improve performance by reducing antagonisms
- Non-flammable (no petroleum solvents or alcohol)
- Non-corrosive

BASAL & CUT STUMP APPLICATIONS

RESULTS

Trycera can greatly reduce the amount of active ingredient used.

On 1,000 acres, Trycera reduces the amount of active ingredient used by 560 lbs for ester formulations.

*ae = acid equivalent
