

Health Literacy Environment [HLE2]

Interested in assessing the health literacy environment of your hospital or health center?

In light of a growing interest in the health literacy environment, Rima Rudd and Sandy Oelschlegel and members of the Health Literacy Task Force at the University of Tennessee Medical Center have updated the tool from the 2007 Rudd & Anderson workbook. Contextual factors can facilitate or impede access to information, care, and services. Use of the HLE2 Tool supports efforts to improve health literacy.
